INSTALLING ZERO BRUSH:

Go here to watch the video on installing & setting up Zero Brush and for tips on efficient workflows and best practices: https://www.youtube.com/watch?v=XYLKV2KUXOM

To review Zero Brush features and download the latest Zero Brush manual go here: http://blendersensei.com/zerobrush15cyclesbakepaintingishere/

BASIC INSTALL INSTRUCTIONS:

Your purchase should look something like this once downloaded "Zero Brush.zip". Right click the file and unzip it leaving the addon folder. If you don't have zip software, "J-Zip" and "7-Zip" are free programs you can use. Some internet browsers like Safari may automatically unzip the file for you, if so, you can skip the unzipping step.

• Now open Blender and go to "File" at the top left side of your screen and select "User Preferences". Now select the "Add-ons" tab at the top of your screen.

• Select the "Install From File" button located at the bottom of the User Preferences window and navigate through the folders to find the unzipped folder you downloaded and select the file that looks like this "Zero_Brush.py". Note that the file with the '.py' extension is the one you want to select.

• With the addon selected press the "Install From File" button located near the top right of your screen.

• Now that the addon has been imported, you should see the addon appear on the right side of the screen with an empty checkbox to its far left. Click this checkbox to activate the addon.

• Make sure you press "Save User Settings" at the bottom left of your screen before exiting Blender. Now Restart Blender. Installation complete.

These are the basic first steps of installing your addons but there's lots to learn about how to get the most out of your purchase. Be sure to check out youtube.com/blendersensei for more information.
